PROFILE

Senior Software Engineer with over 9 years of experience in building scalable web applications and leading development teams. Holds Master's degrees in Computer Science and Operations Research, providing a strong foundation in both theoretical and applied aspects of technology and optimization. Proven expertise in JavaScript, ReactJS, Architectural Design and System Building. Demonstrated leadership in integrating innovative solutions and driving efficiency in startup environments. Experienced educator with a passion for mentoring and fostering innovation through technology.

WORK EXPERIENCE

Senior Software Engineer | Oneflow AB, Digital Signature and Contract Management Platform, Stockholm, Sweden

January 2023 - December 2024

- Strategically integrated TypeScript into a mixed legacy codebase with FlowType and JavaScript, resulting in a 70% reduction in type-related errors, significantly enhancing code reliability and maintainability. Leveraged previously introduced Zod's type inference for robust type hinting in business data
- Automated the conversion of JavaScript modules to TypeScript with a custom script preserving the version control history, saving over 200 hours of manual work and accelerating development timelines
- Unified distributed ACL permissions into a single utility module, managing complex contexts and user roles (owner, guest) to simplify maintenance, migration and enhance scalability.

Tools: TypeScript, ReactJS, Python

Engineering Team Lead | Oneflow AB, Stockholm, Sweden

October 2021 - December 2022

- Co-led the development of a new JSON-based rich text editor seamlessly integrating with legacy HTML, increasing user satisfaction by 60% and providing a modern, cohesive editing experience.
- Mentored and empowered the development team to a self-organizing model, overseeing hiring and onboarding while instilling a continuous improvement culture. This resulted in increased productivity, stronger ownership, and scalable team practices.
- Pioneered an end-to-end testing transformation with Playwright, starting with an innovative approach to replicate mob testing scenarios. This significantly reduced regressions and boosted efficiency. Later, I spearheaded a complete rewrite of the end-to-end testing suite in Playwright.
- Engineered a lightweight Zod-based data validation library which streamlined data validation and minimized runtime errors.

Tools: JavaScript, TypeScript, Python, ReactJS, Webpack, Jest, Zod, Testing-library, Playwright, MySQL, Nodejs, Express.js, Flask

Full Stack Integration Engineer | Oneflow AB, Stockholm, Sweden

March 2019 - September 2021

- Established the Integration Team from the ground up, creating foundational processes and best practices for long-term scalability, while strategically aligning integration solutions with business needs.
- Designed multi-client applications with Python and React.js, facilitating seamless integrations with platforms like HubSpot and SuperOffice, expanding Oneflow's reach and interoperability. Helped Microsoft Dynamics and Salesforce Development with reviews and frontend decision making. Built connector application extensions for the CRM integrations and Teamtailor
- Stabilized and enhanced the Public API, which enabled a robust third-party integration ecosystem, contributing to client satisfaction and platform versatility.

Tools: Python, Reactjs, CRMs (HubSpot, SuperOffice, Microsoft Dynamics, Salesforce), Con-nexion

SKILLS

Product: Adaptable Problem Solving, Proactive Problem Prevention and Elimination, System Thinking, Detail Orientation, Innovative Adjacent Thinking, Creative Solutions

Development: Agile, Test Driven Development, Behavior Driven Development, End-to-End Testing, Pair/Mob Programming

PROJECTS

Selfie Signin

Proof-of-concept: Users register by submitting multi-angle facial images to train an AWS Rekognition model, enabling seamless face-based logins

Adaptate

Dynamic and Adaptable Model Validator Using Zod, Interoperable with OpenAPI

ACCOMPLISHMENTS

HashiCorp Terraform Associate Exam Cram [O'Reilly Live Event] 2 days Live Course

DevOps

LangChain Chat with Your Data

AI

Build LLM Apps with LangChain.js

AI

TECHNOLOGIES

AI: LangChainjs, Agents

Workflow: Graphite

Fullstack: Remix, Nextjs, Astro, Solid-start

Languages: C, C++, Java, R, Erlang, Elixir, Rust

Data Science & ML: R, Python, NumPy, Panda, Scikit-learn

Front-End tools: Esbuild, Vitejs

API Frameworks: Django, Eve, Flask

Databases: MySQL, Postgres, MongoDB

Deployment: AWS (EC2, S3, IAM, ELB), Heroku, Netlify, Vercel, Fly.io

Miscellaneous: Data Visualization, KPI Implementation, SEO Optimization, Accessibility Compliance, Speech Recognition, Chat Bot Development

JavaScript Developer | Oneflow AB, Stockholm, Sweden

April 2017 - February 2019

- Innovatively Integrated React Router into a Backbone.js-based client to build Identity and Access Management, facilitate faster prototyping cross-linked user management and efficient testing.
- Optimized CI build processes, reducing build times by 40%,
- Contributed to modernizing the legacy codebase by transitioning to React.js.

Tools: Python, Reactjs

Full Stack Developer | Weavler AB, An accessible e-commerce artisans platform (with 1.6M SEK PTS grant), Stockholm, Sweden

January 2016 - March 2017

- Managed AWS cloud infrastructure, reducing operational costs by 40%.
- Integrated services like Mandrill, Slack bots, and PayPal, improving platform functionality. Implemented SEO strategies with server-side rendering.
- Designed responsive email templates for email clients and browsers.
- Created an intelligent notification and chat bot for onboarding and FAQs. Developed a open source babel plug-in to quickly implement translations to the entire project. Enhanced accessibility with text customization and color filters, aligned with WCAG standards. Experimented advanced features like speech synthesis and recognition, improving accessibility.

Tools: JavaScript, Express, Reactjs, Alt.js, Accessibility, SSR, MongoDB, Babel Plugin(OSS)

Software Engineer Intern (Summer Project) | Bumbee Labs AB, Stockholm, Sweden

July 2015 - September 2015

- Applied MongoDB aggregation and map-reduce to generate structured reports from millions of raw data samples.
- Enhanced full-stack dashboard with gulp build and key performance indicators.
- Explored migrating tech stack to Reactjs and Eve Python framework.

Tools: MongoDB, AngularJS, Python, Heroku, Laravel (PHP), System Monitoring
